WHO WE ARE

“Transforming challenges into opportunities for building an efficient future through solutions capable of processing company data in real time to develop resilient, effective, and scalable strategies and policies”

Since 1994, Progetto 6 has been operating internationally with the aim of delivering innovative, cutting-edge technological solutions for business process monitoring, control, and management. Warehouse logistics optimization production control, time and attendance management and access/visitor monitoring are the main focus area of the company.

Thanks to architectural solutions supported by specialized teams—characterized by expertise, determination, and enthusiasm—Progetto 6 contributes to growth and innovation supporting transformation through IT technologies.

The main objective is to provide modular and scalable solutions, designed according to specific business needs, capable of monitoring key company activities such as goods, assets, and personnel, evolving over time in harmony with business processes.

VISION

The challenges set by an increasingly competitive and unpredictable global environment require a growing level of control and data precision.

Accurate mapping of business processes and strategy-related activities in data programming and production is essential in defining the right business choices, becoming a key element for business development.

Mapping and managing corporate data and processes thoroughly and accurately enables more effective decision-making.

MISSION

IDENTIFY. ANALYSE. MANAGE.

Understanding business processes and the value of information enables the delivery of integrated solutions that optimize company performance in line with the evolving needs of specific markets.

This commitment is what defines Progetto 6: providing proprietary know-how and consulting expertise alongside partners to deliver innovative, advanced and strategic products and services.

TRACEABILITY

COMPLETE CONTROL FOR EFFICIENT LOGISTICS.

Providing clients with a complete set of software and hardware solutions that allow monitoring, planning, and managing every step of the process is the foundation of goods traceability.

Efficient management ensures control over the entire production chain—from supply to distribution—granting an effective and structured logistics system.

Progetto 6 supports companies in developing traceability systems that improve processes, enhance security, and optimize results.

ANALYSIS AND MAPPING OF ENVIRONMENTS AND PROCESSES FOR INTEGRATED, TIMELY, AND EFFECTIVE SOLUTIONS.

The strong know-how developed by Progetto 6 is the ideal complement to a broad range of technologies, as it enables the design and implementation of technological systems built around the specific needs of the client.

Performance data and indicators, internal dynamics and processes, buildings, infrastructures, and equipment are key elements in defining the intervention and selecting the technologies to be adopted.

Through careful analysis of these elements, Progetto 6 is able to provide all the necessary support to achieve the client's specific objectives, identifying the most suitable solutions in terms of cost-benefit.

A CONSTANT PRESENCE FOR CONTINUOUSLY EVOLVING PROJECTS.

Integrating new solutions into business processes is a strategic and delicate activity, capable of impacting daily operations. Over time, Progetto 6 has developed procedures and specific intervention methods to prevent and manage unexpected issues and performance drops, both during roll-out and testing phases, as well as after implementation in full operation.

From training internal company staff, where required, to maintenance, review, updating, and evolution of integrated systems, Progetto 6 supports its clients with a dedicated team of specialists, ready to develop new functionalities by selecting the best products from a wide catalog of suppliers, operating with full independence and always in the client's best interest.

SOLUTIONS

DEDICATED APPLICATIONS FOR EVERY BUSINESS AREA.

Within Progetto 6's offering, there are applications designed and developed based on the specific characteristics of the various sectors of intervention.

The wide range of opportunities, integrable for optimal business process management, is complemented by a broad selection of devices, readers, printers, and consumables, continuously updated and evolving.

HUMAN RESOURCES

Managing complex interactions between companies and employees, visitor flows, meetings, spaces, and corporate events through a single, intuitive, and dynamic system.

This is how Progetto 6 HR solutions are created: platforms and applications capable of operating with RFID, iBeacons, biometrics, and APIs, fully compliant with privacy and security regulations, and designed for seamless integration into any system.

LOGISTICS

Progetto 6 provides systems based on RFID and barcode technologies to optimize business processes and operations. Solutions capable of supporting high efficiency standards, traceability, and process monitoring throughout the entire supply chain.

TRACEABILITY

Labeling represents the perfect meeting point between the ever-increasing demands for business efficiency and supply chain resilience, and is articulated through traceability, identification, and management.

Progetto 6 positions itself as a highly specialized player in the sector, capable of offering a unique service in terms of completeness and customization. Its range of services—essential for mapping all products in real time at every level of the supply chain—includes software for labeling, printers, printing supports, and barcode readers.

Progetto 6's offering allows clients to fully manage the labeling process, supported by a structured organization and optimization of the entire logistics workflow, benefiting from the expertise of a company with unique competencies.

SWIT4.0

A SINGLE SOLUTION FOR HUMAN RESOURCES,
SECURITY, PRODUCTION, AND LOGISTICS,
ENABLED BY INDUSTRY 4.0 TECHNOLOGIES.

Swit4.0 is a software application for Industry 4.0, designed to integrate human resources, security, production, and logistics.

With over 20 years of Progetto 6 expertise, the platform offers customizable, multi-platform, multilingual, and multi-database applications.

Swit4.0 enables role-based access levels,

allowing the configuration of a dedicated control panel for activities and permissions for each operator, while localizing and organizing specific business processes. Thanks to Swit4.0, it is possible to create the ideal interface by integrating data and functionalities from TimeOut, StepOne, Reception, Blackboard, RDP, Packer, Labeler, CheckWeight, and CheckLine into a single application.

Multi-platform

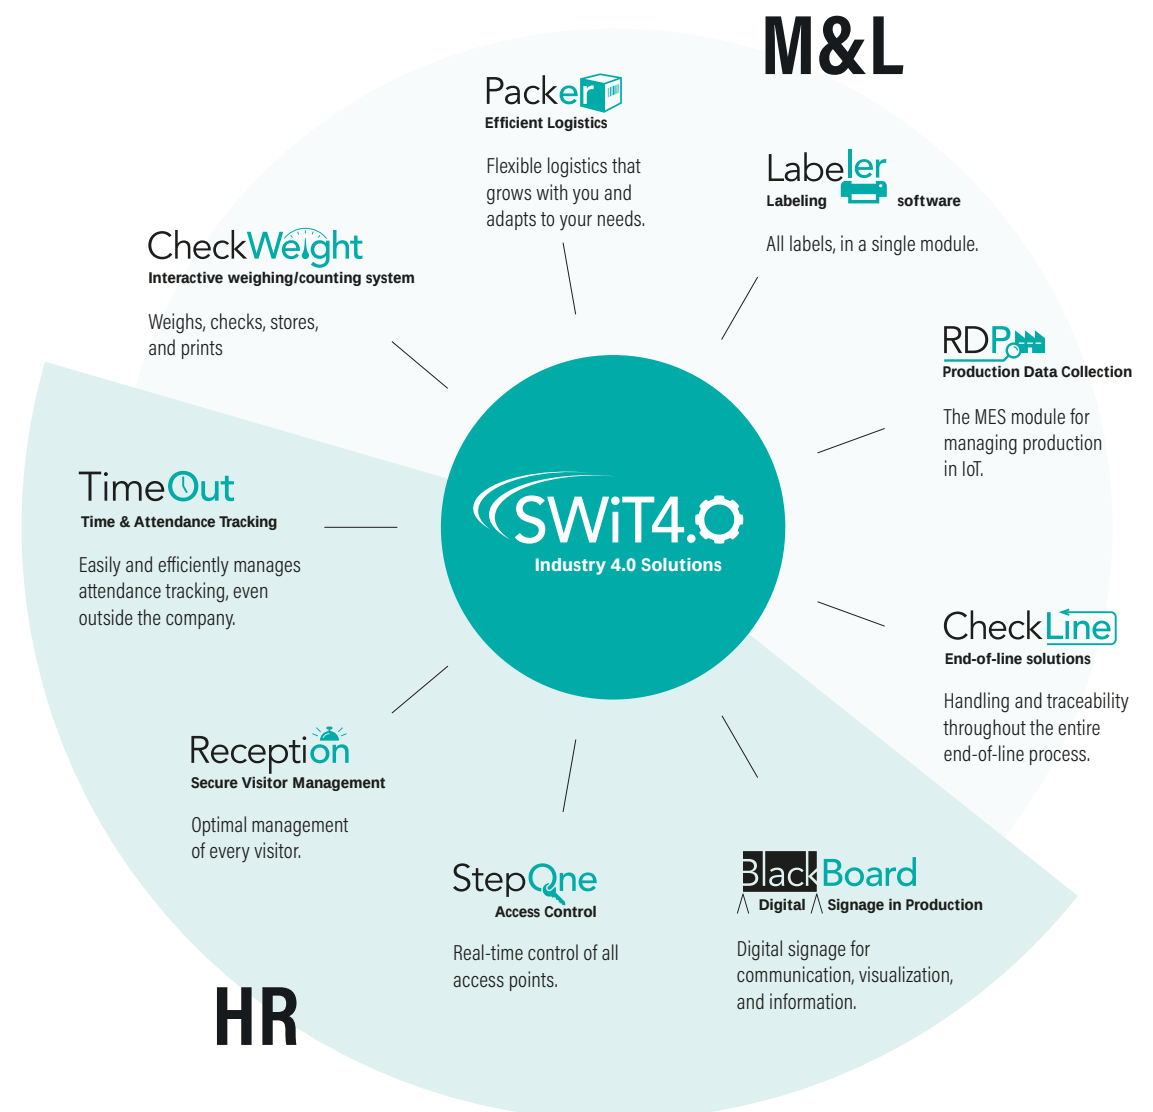

Swit4.0 is designed to ensure full functionality from any workstation, whether desktop or mobile, supporting iOS, Android, Linux, and Windows operating systems.

Multi-database

The Swit4.0 suite interfaces with all major relational databases such as MySQL, Oracle, PostgreSQL, Microsoft SQL Server, and Linux SQL Server.

Multilingual

Swit4.0 supports multiple languages, allowing each user to access functionalities in the language set in their profile.

LOGISTICS

COMPANY LOGISTICS IS CENTRAL TO THE ENTIRE ORGANIZATION.

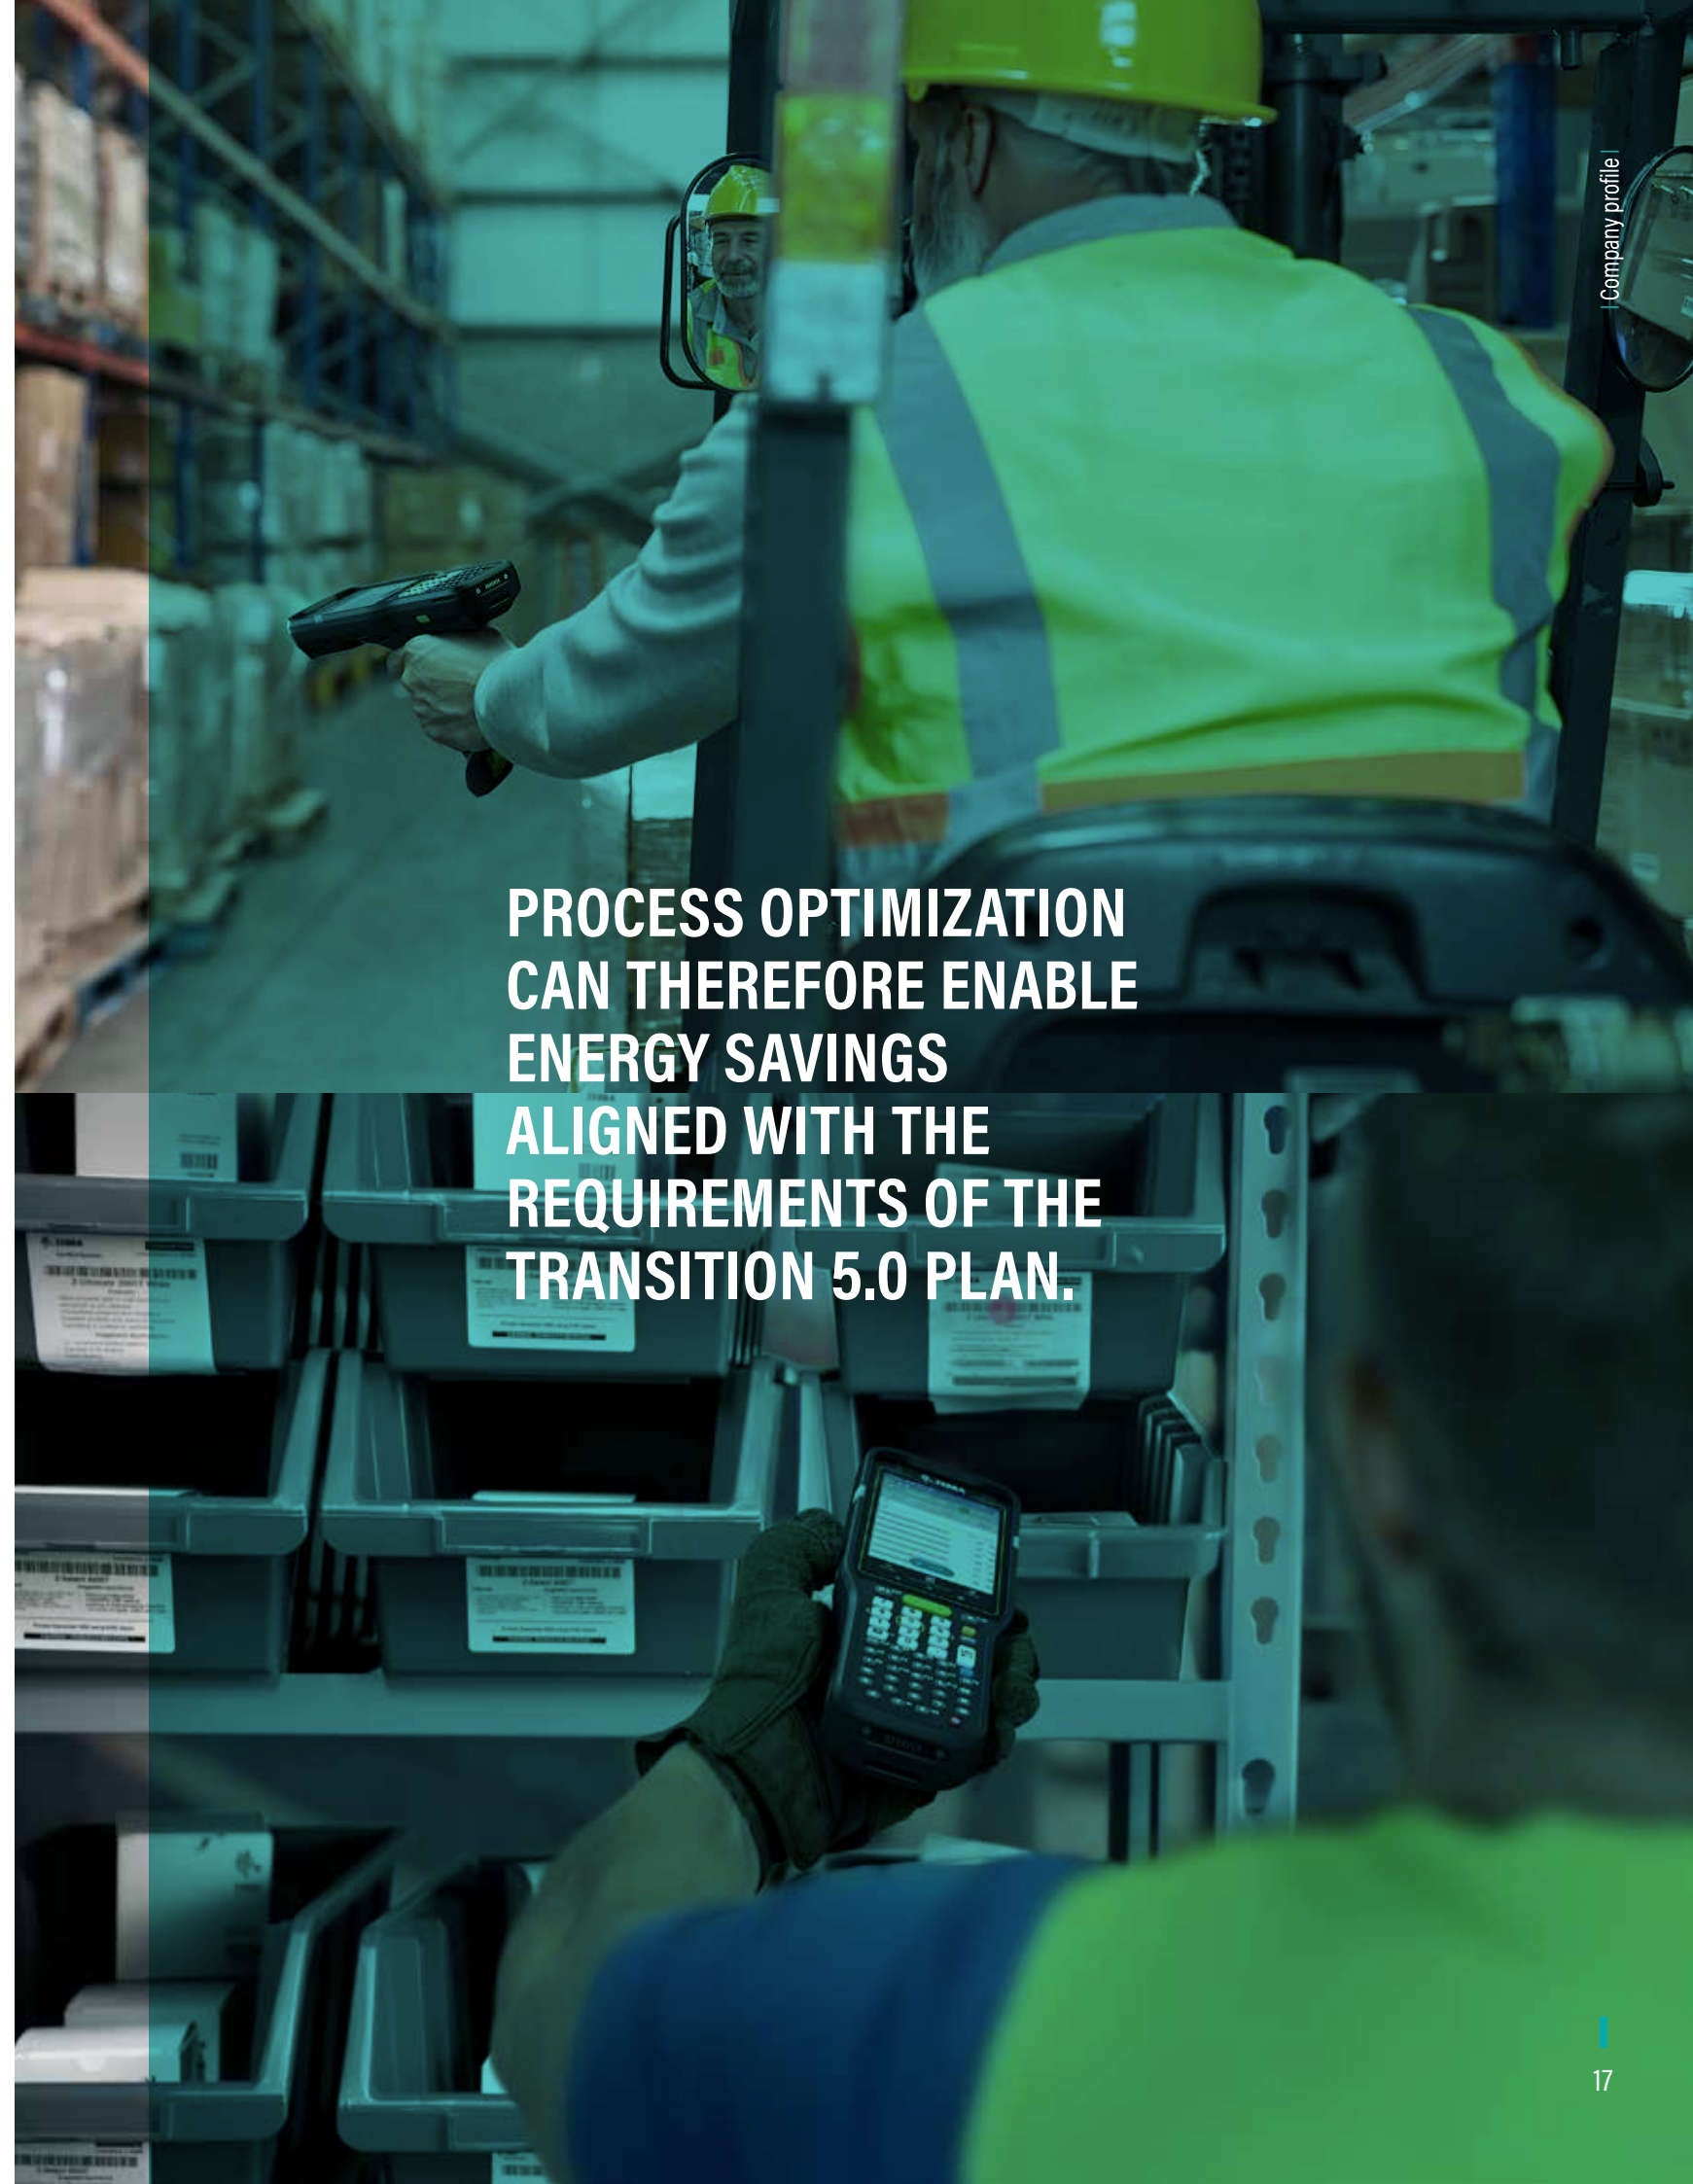

Because it defines and regulates the standards for material handling in production, primary and secondary product packaging, and consequently impacts product costs, as well as handling, shipping, and distribution processes, for example at large-scale retail points.

Progetto 6 develops and offers Industry 4.0-ready solutions for warehouse logistics, traceability, production data collection, and end-of-line packaging management (automatic labeling systems, RFID gates), as well as shipment management.

DEPARTMENTAL SYSTEM

With the adoption of the departmental system for warehouse management and handling, WMS **Packer**, combined with real-time data management, Progetto 6 ensures improved efficiency across various processes and business costs, including: a 10% increase in productivity, an 80% reduction in stock shortages, a 95% increase in punctuality, a 50% reduction in urgent orders, a 35% reduction in WIP, and a 30% reduction of warehouse stock.

Progetto 6 also provides its own MES factory solution, **RDP**, which collects all production data in real time. Combined with data from installed IoT sensors, it enables not only the monitoring of production progress and efficiency and productivity statistics, but also the measurement of energy consumption per unit produced, highlighting increased productivity at equal energy consumption.

PROCESS OPTIMIZATION
CAN THEREFORE ENABLE
ENERGY SAVINGS
ALIGNED WITH THE
REQUIREMENTS OF THE
TRANSITION 5.0 PLAN.

HUMAN RESOURCES

THE TRUE COMPETITIVE ADVANTAGE OF COMPANIES.

Progetto 6 therefore offers solutions to register and monitor personnel for workplace safety and security purposes, both through physical control and management tools such as turnstiles, and through applications such as its own **StepOne** access control software, which allows monitoring and authorization of access for people and vehicles by integrating technologies such as RFID tags and OCR license plate recognition for cars and trucks.

With 30 years of experience, Progetto 6 recognizes that employee protection begins when individuals travel to work and are paid based on their presence at production sites, offices, construction sites, or client facilities. For this reason, it provides solutions to accurately track attendance through dedicated devices that ensure objective, secure, and geolocated time tracking where necessary, supported by the **TimeOut** management application, accessible from any device equipped with a web browser or through dedicated apps available on the Play Store and Apple Store.

RECEPTION SOLUTION

Furthermore, with **Reception**, Progetto 6 enables companies to register and manage visitors, guests, and maintenance personnel accessing production sites or offices, sending invitations directly from their Microsoft 365 or G Suite calendars, booking meeting rooms, and informing visitors about privacy and safety regulations in case of emergencies.

Visitors can independently perform check-in and check-out using a dedicated totem by scanning a QR code from their smartphone, just like at the airport.

PARTNERSHIPS

Partnerships with Progetto 6 are built on shared values and a common vision focused on local growth, the development of new products, and innovative solutions for evolving markets.

Entrepreneurship, professionalism, and passion guide an approach based on collaboration, listening, and dialogue, capable of generating growth paths and strong, lasting partnerships.
